## Summary

My name is Jonathan, I'm a up and coming datascientist with a background in game development and mathmatics. To perform Analysis I have gotten an indepth knowledge of Python, tableau, and sql. I have also been developing skills in Html and javascript to perform better visualizations.

My interest for programming began in highschool where I took many computer science courses.  Following my graduation I persued a degree in data analytics through Ivy Tech University. To further my experience I have also taken Butler University's data science certification program sharpening my skills in the field.

## Education

**Aug 2020 - Present**

**Computer Science**
**Ivy Tech Community College**

Currently working on getting a bachelors in computer science, planning on transfering to IUPUI after getting some basic classes out of the way.

**Oct 2021 - Mar 2022**

**Butler Datascience Program**
**Butler University**

A program that covers Python, Javascript, HTML, R, and SQL with a goal to teach students  entry level data science.

**Sep 2016 - Dec 2019**

**Core 40 Highschool Diploma**
**Lawrence North Highschool**

## Favorite Projects

**Stock-Analysis-Platform**
By Far one of my favorite projects Is a stock analysis platform I have been developing for a team of Independent stock traders. This platform is designed to optimize stock analysis and give traders an edge with automated technical analysis.

**United States Homeless Data Analysis**
This project is one of the more meaningful projects I have worked on. I worked in a team enviorment as we investigated homelessness in the U.S, and used a variety of machine learning algorithms and visualizatons to draw meaningful conclusions from a large collection of data.
